

# CASE STUDY

A Renal Care company. Acquired Cafeto Software services to transform how nephrologists prescribe medication to their patients.

**Cafeto** | Your Technology Partner  
to Deliver on Your Success

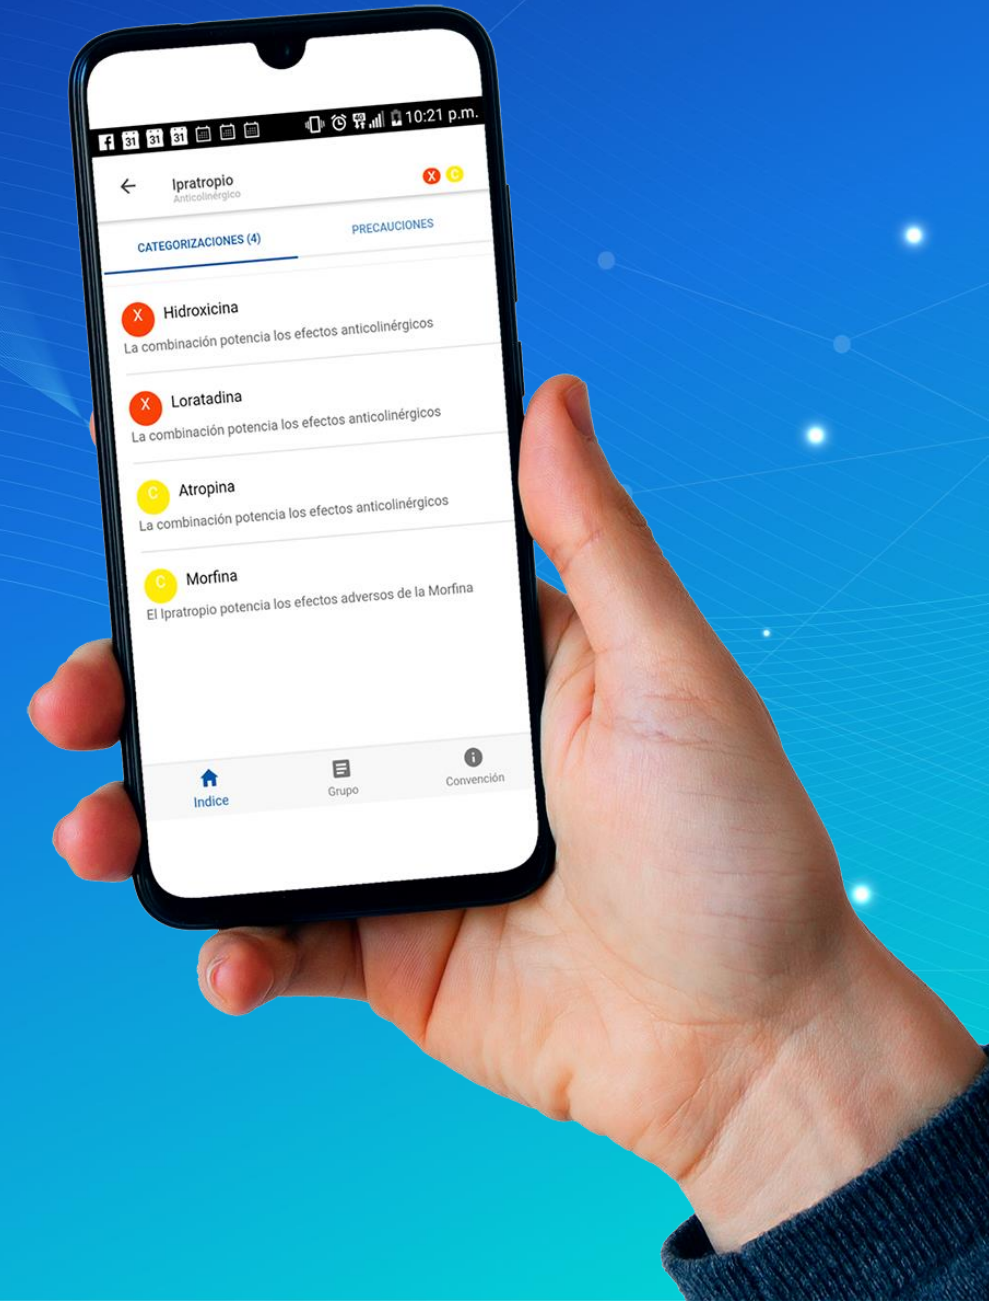

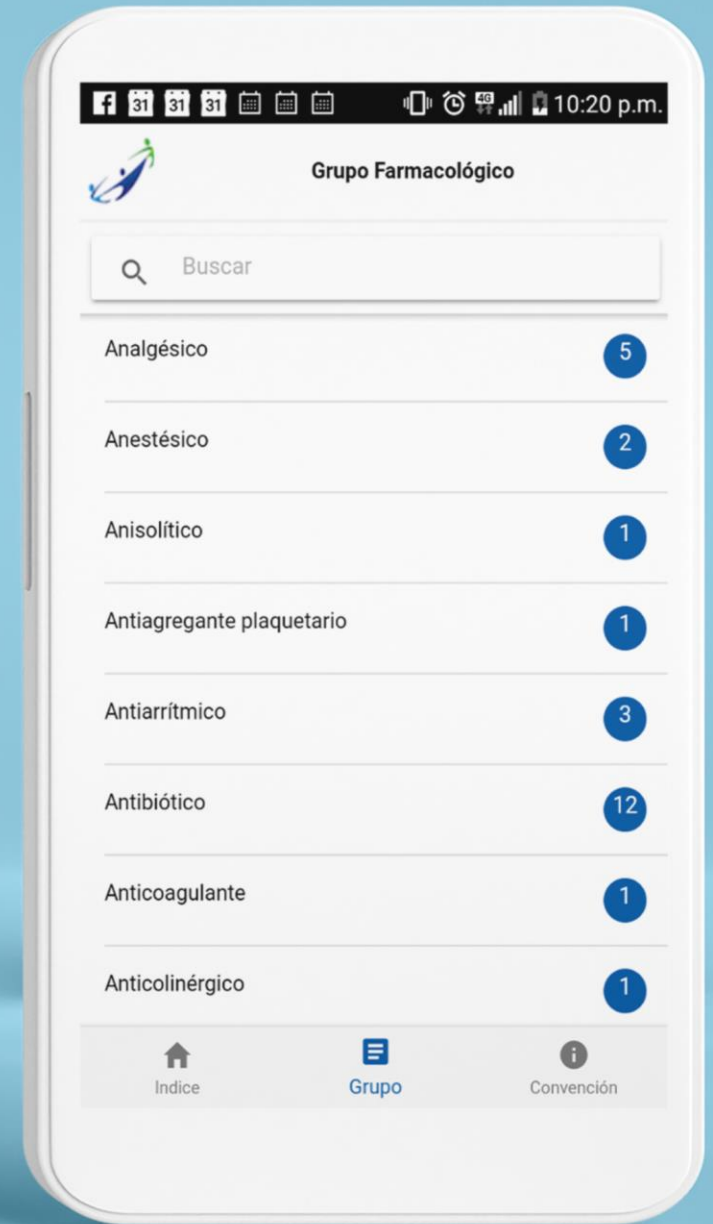

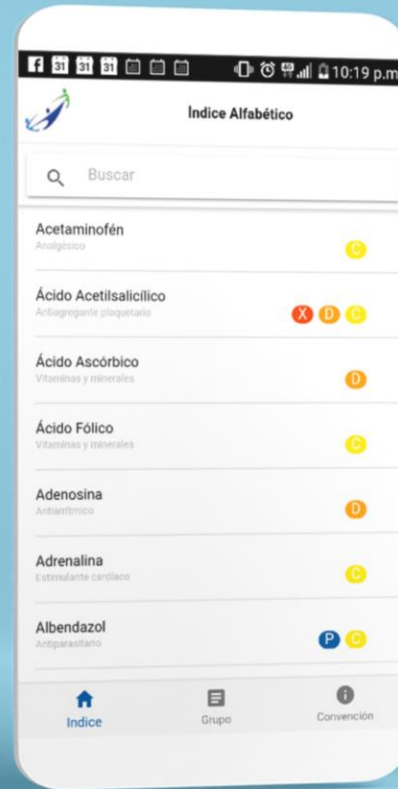

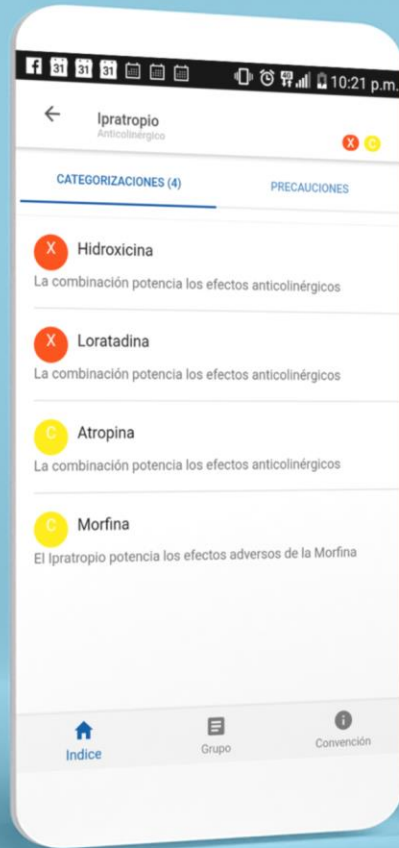

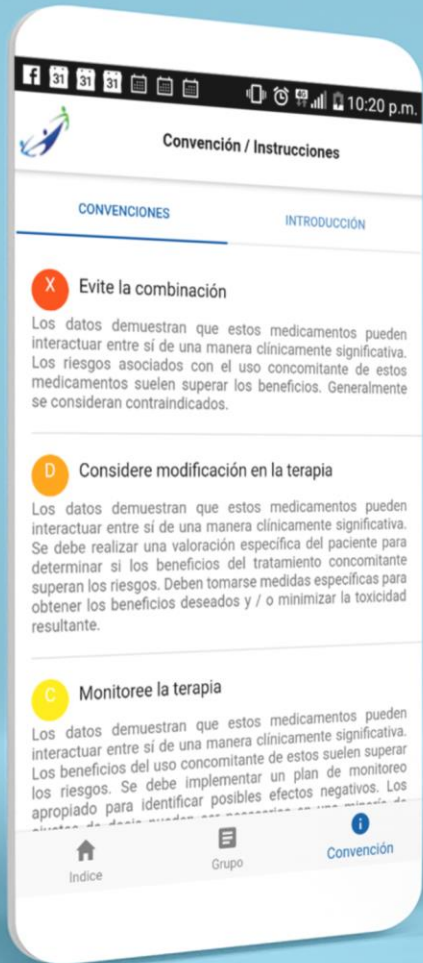

## Context

This company specializes in Chronic Kidney Disease care. Their outpatient hospital looks after an average of 7000 to 8000 patients nationwide. Nephrologists, based on the diagnosis, choose the medications required for renal patient's monthly formulation.

- Some medications can cause reactions interacting with another one. A few are easy to control, some can be modified, and others are better to avoid.
- Sometimes nephrologists in their care process, as they are fast, is not enough to search the bibliography and literature to see if the prescription has a reaction interacting with another.
- If you have a saved document, the doctor has to print it, and it is not practical or environment friendly.

# To support this prescription process

- We'll simplify, get the extensive volume of prescribed medications for patients, and give them possible reactions they may have interacting with each other.
- We'll alert the patients when they should avoid combining medications, when it should be considered a modification, or when it can be prescribed, but it's necessary to monitor in therapy.
